

GXS BizManager®: Managed File Transfer

The Power and Flexibility of Secure Document Exchange

The need to transmit documents securely to business partners or within your own company is increasing rapidly. These critical, time-sensitive documents need to be secure and auditable, and delivery must be guaranteed. However, today's businesses do not have the resources to track individual documents sent via FTP or email. What companies need is an automated and secure document exchange powerhouse.

GXS BizManager®, a comprehensive B2B Gateway solution, can manage your secure document exchanges, no matter the industry you are in or the size of your company. Because while the type of business documents may vary by industry, the goals are the same: the standardized, synchronized and streamlined exchange of information, both internally and externally.

Whether you're sending personnel information, sensitive CAD drawings, EDI documents, payroll information, intellectual property or other sensitive data, BizManager will ensure your documents are transmitted securely and efficiently. It will also provide the auditable tracking information you need for any regulatory compliance questions. Web-based, it leverages the latest industry standards and provides for direct, secure document exchange. It can also reduce the time, cost and effort of fulfilling electronic communication requirements.

BizManager can handle your secure document exchange for:

- Transferring 401K information to your benefits provider
- Sending payroll data to a third party
- Sharing financial information with your bank
- Communicating intellectual property or CAD designs to a design firm
- Submitting an EDI purchase order to a supplier

Security

When it comes to electronically exchanging the information that runs your business, security is paramount. In addition to your own requirements, BizManager meets the most demanding security requirements of your business partners as well as the strictest requirements of financial, healthcare and government institutions.

BizManager supports the most secure document exchange standards available, with encryption, non-repudiation and digital certificates for authentication—ensuring documents arrive unaltered and that senders and receivers are who they claim to be. Inovis' patent-pending encryption process supports the high-speed throughput of large amounts of encrypted documents, reducing bottlenecks and keeping documents flowing.

KEY BENEFITS

- Simplify trading community management with integrated supply chain communication solutions
- Meet industry mandates and trading partner requirements
- Realize 100% trading partner connectivity
- Minimize inefficiencies, transaction-processing costs and cycle times
- Gain real-time visibility into business activity and performance
- Integrate existing EDI translator/mapper solutions and back-office systems with ease
- Plan for future growth with a flexible, scalable solution
- Enable the cost-effective and secure electronic exchange of information with your trading partners

BizManager has been independently certified by eBusinessReady® for full support of leading security standards such as:

- Personal Information Exchange PKCS 12
- Cryptographic Message Syntax Standard PKCS 7
- S/MIME Signed/Encrypted
- PGP
- RC4 128
- SSL
- TLS

Advanced control over password configuration further protects your data from unauthorized users, with combinations of uppercase, lowercase and numeric characters, and a log and limit on the number of invalid logon attempts.

SecureLink Outpost Redirector extends the solution by supporting two key security tenets:

- No external party can push data/files directly to internal systems via open ports.
- No data/files are stored on a server in the DMZ, not even temporarily.

Reporting and Visibility

Visibility into your document exchange is crucial. Companies need to know who created the file, who edited it, who sent it, how it was exchanged, who received it and what happened to the document from there. Whether the document is intellectual property, personal information, credit information or some other sensitive file, you need the visibility to track the document through its entire lifecycle. This must be done efficiently and securely, which is what BizManager is designed to do and more.

With email, you can verify that an email was sent and you may even be able to verify that the recipient read it. However, you have no knowledge of whether the file was successfully delivered or not. With FTP, you can see the file was placed on the recipient's FTP server, but you have no knowledge of whether the recipient downloaded the file. With BizManager and secure document exchange, the point-to-point communication verifies both the send and receive aspects of the communication, as well as who read it and when.

Guaranteed Delivery and Auditing

BizManager ensures all of your documents are delivered on time, every time. The guaranteed delivery of your files is vital to daily business operations. Built-in scheduling and unattended operation allows you to be more efficient by automating many recurring manual processes.

Through the file integrity feature of auditing you can ensure the document you sent is exactly what the end user received. You can also easily check your records to guarantee delivery and receipt of the document, whether you are working with an internal or external associate.

The GXS BizManager family of solutions is designed to connect a company of any size to its entire business community while ensuring a secure exchange of information.

Scalability

A highly flexible solution, BizManager can scale to meet your large and small business needs. You may connect to multiple destinations—even a combination of internal and external—concurrently. It can also be extended to function as an easy interface to online exchanges and marketplaces while offering additional communication options for your evolving company initiatives.

For companies exchanging high volumes of files, the solution can run across multiple servers for optimum load balancing. And, the number of users within the company does not affect the price, giving you the flexibility to give access to everyone who needs it.

BizManager is currently used by large and small organizations alike, regardless of the size and type of documents being sent. This complete B2B solution can support all of your business units while providing a highly dependable, robust and easy-to-use tool for your entire organization.

BizManager offers peace of mind for your secure files. With BizManager, you can:

- Remove the risk of unsecured document exchange by replacing FTP and email transfers
- Assist in your compliance with regulatory bodies such as Sarbanes-Oxley
- Eliminate the manual processes of your current solution
- Guaranteed delivery of secure time-sensitive documents
- Have full knowledge of your document lifecycle including creation, edits, delivery and deletion

About GXS

GXS is a leading provider of B2B e-commerce solutions and operates the world's largest and most expansive network of integrated business communities. The company's software and services simplify and enhance businesses process integration and collaboration among networks of trading partners. Organizations worldwide, including more than 75 percent of the Fortune 500, use GXS solutions to extend their supply chain networks, optimize product launches, automate warehouse receiving, manage electronic payments and gain supply chain visibility.
