

OpenText™ TrustedLink™ Windows

Operate a powerful eCommerce program from a desktop

Access all EDI needs from a **single interface**

Protect **high-value** relationships with a **low-cost solution**

Save time by reducing manual data entry and **automating repetitive tasks**

Onboard new trading partners **quickly and easily**

With an effective eCommerce program, organizations can meet the requirements of their larger trading partners and gain significant operational efficiencies and cost savings. OpenText TrustedLink Windows is a stand-alone, PC-based EDI translation tool for small to mid-market companies.

Quick to install, simple to use and affordable, TrustedLink Windows simplifies the exchange of information with trading partners. Designed specifically for the Microsoft® Windows® platform, TrustedLink Windows provides everything an organization needs to run an eCommerce program with ease and precision.

EDI made easy

Installation and trading partner wizards make set-up a snap and an intuitive browser interface makes TrustedLink Windows easy to use, reducing ramp-up time for new users. In fact, when an organization receives a transaction from a new trading partner, that partner is automatically set up. Communication with trading partners—no matter their requirements—is fast, accurate and secure via a desktop computer.

Run an eCommerce program with ease

OpenText™ TrustedLink™ Windows is a cost-effective EDI solution that simplifies the exchange of information with trading partners and within an enterprise. Designed specifically for the Microsoft® Windows® platform, TrustedLink Windows provides everything an organization needs to run an eCommerce program with ease and precision.

Flexible tools to communicate with trading partners

Increasingly, companies are being required by industry-leading enterprises to support protocols such as AS1/AS2/AS3 for the exchange of EDI over the internet. TrustedLink Windows is fully integrated with OpenText™ BizManager™, allowing users to meet industry mandates by supporting these and other established standards. Users can send and receive any data type via multiple connectivity methods for the most flexible business partner communication—without any customized programming.

Protect business relationships and save time

TrustedLink Windows' extensive forms library allows users to see which forms their partners prefer so they can translate documents based on their specific requirements. Time-saving capabilities, including the ability to quickly turn an inbound transaction into an outbound transaction (e.g., purchase order to invoice), increase efficiency by eliminating much of the data entry usually required. Organizations can further streamline processes with back-office integration and task automation.

Handle complex mapping requirements with ease

With OpenText's transformation mapping tool, organizations can quickly and easily expand their trading community. Mapper addresses the complex transaction requirements of larger trading partners with intuitive wizards and drag and drop functionality. With Mapper, users can create mapping rules or use JavaScript for more sophisticated translations.

Extend EDI to the people who need it

The optional Remote User Interface (RUI) module allows organizations to extend key functionality to additional users.

Features	Benefits
Powerful EDI from the desktop	Provides easy-to-use access to all EDI needs through a single interface from a PC
Drag and drop data mapping	Creates and processes transactions with new trading partners quickly and easily
Back-office integration	Increases efficiencies by integrating inbound/outbound EDI with back-office applications
Task automation capability	Saves time by scheduling communications, printing and translation tasks
Forms library	Enables users to manage trading partner change effectively with over 10,000 data entry and print forms
Multi-user remote access	Extends the power of EDI throughout the enterprise with the TrustedLink Windows Remote User Interface (RUI)
